Education

- **Indian Institute of Technology, Patna** *2025 - 2028*
  B.Sc (Hons.) in Computer Science and Data Analytics CGPA/CPI : 9.74
- **G.P.G.College, Itwan, Haspura, Aurangabad (BH)** *2021*
  INTERMEDIATE ANNUAL EXAMINATION (BSEB, PATNA) Percentage : 64
- **D C S High School Dindir, Aurangabad (BH)** *2018*
  SECONDARY SCHOOL EXAMINATION (BSEB, PATNA) Percentage : 58

Experience

- **Zaalima Development [Clothes – app]** *17 April 2025 – 17 July 2025*
  Web Development Intern Electronics City, Karnataka, 560100
  - Built a dynamic e-commerce platform for a custom clothes printing business where users can choose apparel, upload their own designs, preview on mockups, and place orders. The admin can manage inventory, view orders, and update order statuses. Setup frontend and backend boilerplate.
  - Create user authentication system using JWT. Design product model with variants. Add shopping cart and checkout functionality. Enable order tracking for users. Add user profile and order history.
- **CodSoft [Contact Book]** *10 January 2025 – 10 February 2025*
  Python Programming Intern Remote
  - Contact Information Store name, phone number, email, and address for each contact. Add Contact Allow users to add new contacts with their details. View Contact List Display a list of all saved contacts with names and phone numbers. Search Contact Implement a search function to find contacts by name or phone number
  - Update Contact Enable users to update contact details. Delete Contact Provide an option to delete a contact. User Interface Design a user-friendly interface for easy interaction.

Personal Projects

- **Cyber Guard AI— AI-Cyber Security platform (IIT Patna Internal Competition)** *October, 2025*
  An Intelligent CyberSecurity Solution (Frontend + Backend + DB + AI + CyberSecurity Implementation)
  - Tools & technologies used : -
    Frontend/UI : React.js + Vite + Bootstrap
    Backend/Core : Node.js + TypeScript
    Database : Supabase
    AI/Machine Learning : scikit-learn (phishing & fraud detection)
    numpy (data preprocessing & analysis)
    NLP models (email text analysis)
    Anomaly detection models (fraud & intrusion detection)
    OpenCV / Pretrained AI models (deepfake & media verification)
  - CyberGuard AI is an intelligent cybersecurity solution designed to detect threats in real-time. This project leverages machine learning algorithms to analyze data such as emails, network traffic, and financial transactions to identify potential security risks. (Phishing & Scam Detection – Analyze email content and flag potential threats.
    Risk Assessment – Calculate risk scores for each input and provide actionable insights.
    Interactive UI – User-friendly interface built with Gradio for easy testing.
    Modular Design – Separate modules for data preprocessing, feature extraction, AI analysis, and dashboard visualization.)
- **Documents Intelligence System , Bajaj Finserv(Team HackRx 6.0 , Hackathon)** *23 July 2025 – 22 August*
  A comprehensive LLM-powered document analysis platform (Frontend + Backend Development)
  - Tools & technologies used : -
    * Frontend : React 18 with TypeScript , Tailwind CSS for styling , Lucide React for icons , Vite for build tooling .
    * Backend : Node.js with Express , JWT authentication , Multer for file uploads , CORS enabled .
    *Database : SQLite for development , PostgreSQL for production , Prisma ORM .

A comprehensive LLM-powered document analysis platform with natural language query processing, semantic search, and intelligent decision making. Documents Processing : Upload & Analyze PDFs, Word documents , and Text files. Natural Language Queries : Process complex queries in plain English. LLM – Powered Analysis : Semantic Understanding and Intelligent decision making. User Authentication : Secure Login/Signup with session management. Real-time Processing : Live Query processing with status updates. Document Management : Upload, view, and organize documents. Query History : Track and export query history. Responsive Design : Optimized for Desktop and mobile devices. (https://documentsintelligence.netlify.app/)

Sanjeevani, GenAI Exchange Hackathon/H2S (Team THE CLUTCHER, Hackathon) *April 2025 - October 2025*

An AI-powered, confidential, and empathetic mental wellness solution (Frontend + Backend Development)

- Tools & technologies used : -
  1. Frontend (The User Interface) : - This is the mobile or web application that the youth will use. The goal is a clean, responsive, and calming interface. Framework: Flutter or React Native. Both are excellent choices for building a single app that works on both Android and iOS, which is crucial for reaching the widest audience in India. Why? They allow for faster development and a consistent user experience across devices. Flutter, being a Google product, integrates particularly well with other Google services like Firebase. UI Library: Material You (for Flutter) or a library like React Native Paper (for React Native) can help create a modern, accessible, and aesthetically pleasing design that aligns with Android and iOS design principles.
  2. Backend (The Application's Engine) : - The backend will handle user authentication, manage requests to the AI models, and process data. Language/Framework: Python with FastAPI or Django. Why Python? It's the leading language for AI/ML development, making it incredibly easy to integrate with Google's generative AI libraries and SDKs. FastAPI is modern, fast, and easy to learn. Containerization: Docker. This will package your backend application so it can run consistently anywhere. Hosting: Google Cloud Run. Why? It's a serverless platform, meaning you only pay when your code is running. It automatically scales up to handle many users and scales down to zero, making it very cost-effective for a new project. It's perfect for hosting your containerized Python backend.
  3. Database (Data Storage) : - Primary Database: Firestore (Google Cloud). User Authentication: Firebase Authentication (Google Cloud). Vector Database: Vertex AI Vector Search (Google Cloud).
- an AI-powered, confidential, and empathetic mental wellness solution that supports and guides youth in overcoming stigma and accessing help. prototype stands out from existing solutions by being youth-focused, AI-powered, and preventive rather than reactive. Unlike typical wellness apps that provide generic resources, it leverages personalized insights, real-time emotional support, and context-aware recommendations tailored to young people's unique challenges. The integration of AI-driven check-ins, stigma-free engagement, and easy accessibility makes it more proactive, adaptive, and inclusive, bridging gaps left by traditional counseling services and static self-help platforms. SpicyToday – AI-Powered Social Media Platform *December 2025 - Currently Developing*

SpicyToday is a full-stack, AI-powered social media platform.(Full-Stack Development)

- Tools & technologies used : -
  - **Frontend:** HTML5, CSS3, JavaScript
  - **Backend:** Python, Flask, Flask-SocketIO
  - **Database:** MongoDB
  - **Real-Time Communication:** WebSockets (Socket.IO)
  - **Authentication:** JWT-based authentication
  - **AI Integration:** AI-powered content & feature modules
  - **Version Control:** Git
  - **Deployment & Testing:** Postman, modular API testing, production checks
- SpicyToday is a modern social media platform built with scalability and real-time interaction in mind. The backend handles thousands of lines of production-grade logic covering authentication, user profiles, posts, stories, reels, likes, views, follows, and direct messaging.
  The platform supports real-time chat and notifications using Socket.IO, ensuring instant user interaction. A modular API architecture allows easy future expansion. Extensive documentation, testing guides, and deployment checklists ensure maintainability and reliability. AI features enhance content interaction and future recommendation capabilities. (Successfully built a **production-ready social media backend.** Implemented **30+ REST APIs** covering all core social features. Achieved **real-time messaging and interactions.** Resolved critical system-level bugs improving platform stability. Created a scalable foundation suitable for **web, Android, and desktop apps.** Delivered a fully documented, deployable application ready for real users.)

Technical Skills and Interests

Languages : Python (Advanced - DSA), C++ (Intermediate), JavaScript (Intermediate)
Developer Tools : Version Control, REST API design, MySQL-Workbench .
Frameworks : Node.js, React.js, numpy, flask
Cloud/Databases : MySQL Workbench, Firebase, Supabase, Google Cloud , MongoDB.
Soft Skills : Communication, Teamwork, Adaptability, Leadership.
Coursework : Data Structures & Algorithms, OOP, Web Development, Data Analytics, Cloud Computing, Software Development.
Areas of Interest : Debates, Sports/Games, Travelling .

Positions of Responsibility

•**SSM(Campus Ambassador Program),** Mood Indigo & Techfest, IIT Bombay *December 2023*

•**SSM(Campus Ambassador Program),** E-Cell, IIT Guwahati *July 2024*

•**Tech Coordinator,** Vaani – The Oratory Society(The Debating Club), IIT Patna *2025 - Present*

Achievements

- **Common Internship Test (CIP)** Ranked 1495 among 18,000 participants. *2025*
- **Gen AI Academy – Google** Certified for mastering generative AI tools. *2025*
- **Bajaj Finserv Hackathon** Developed "Documents Intelligence System" with NLP and LLM-powered query analysis.
- **GenAI Exchange Hackathon/H2S** Built A comprehensive LLM-powered document analysis platform.
